PROBABILITY AND ANALYSIS  
(AT WROCLAW UNIVERSITY OF TECHNOLOGY)

During the last 35 years participants of the probability seminar organized by professor T. Byczkowski at Wrocław University of Technology worked on different subjects on the border between probability and analysis. At first it was the border between Probability and Functional Analysis, now it is the border between Probability and Harmonic Analysis. I will present — from my personal perspective — the most significant results obtained by the participants of the seminar between 1980 and 2015.
